

IMPROVEMENT OF PIACENZA PLANTS

CATEGORY

Waste water treatment (Wastewater treatment plant upgrades)

LOCATION

DESCRIPTION

The project includes interventions on different plants:

1. Castel San Giovanni purification plant: upgrading and / or rebuilding all the purification sectors and installation of an MBR compartment for the final filtration of wastewater, the construction of a new transformer substation, the complete reconstruction of the electrical system, the conversion of final separators to tanks for sludge storage.
2. construction of a new waste water treatment plant in the municipality of Calendasco to replace Imhoff pits;
3. reconstruction of the wastewater treatment plant at the service of the Valconasso locality, no longer able to cope with the flow rates arriving at the treatment.
