

## WASTE TO ENERGY PLANT FOR HEAT PRODUCTION IN PIACENZA

### CATEGORY

Energy efficiency (Cogeneration Facilities)

### LOCATION

### DESCRIPTION

The project involves the construction of a cogeneration section at the existing solid waste-to-energy plant located in Piacenza.

The current state consists of two combustion lines (input 22.7 MW each) that feed a steam cycle with a 11.6 MW condensing type turbine.

In order to strengthen the urban district heating in the city of Piacenza, the city network is expected to be extended and connected to the existing waste-to-energy plant with its consequent modification in order to recover the thermal energy necessary for heat distribution.
